General

What is software quality? How can it be achieved? How can software testing help to achieve quality? How should testing be organised, managed, and automated? What quality and testing practices and techniques are there and what are their strengths and weaknesses? What does software testing and quality assurance look like in today's software development? These are essential questions in this course.

The course includes both individual and group assignments. You will learn how to define a quality model for a product or project, plan quality assurance activities, including testing, create test plans and test cases, and turn those into real manual and automated tests that help assure quality according to the quality model. The course requires some skills in using computer tools, since many of the assignments involve creating and executing actual tests on a computer. Basic programming skills are needed.

Communication channels

See Communication (registered students only).

Practical matters

Lectures are on Tuesdays at 10:15 - 12:00. See the course schedule for more details.

The registration for this course happens in two phases:

1. Course registration (individual) via Sisu. Deadline: By the course starting date.
2. Group registration in MyCourses. Deadline: 17.9.2023

The course has no final written exam. Instead, the course grade is based on the assignments done during the course.

Teacher: Assistant Professor Fabian Fagerholm (fabian.fagerholm@aalto.fi).

Teaching team: Akram Aziz, Ali Amaan, Jamala Khaligova, Manushree Tyagi, Stanislav Chren, Thong Cam, Tuan Tran, Ulaş Aydın, Vipul Kumar, Ziqi (James) Wang (firstname.lastname@aalto.fi)
