Analysing quality using ISO/IEC 25010

To do: Make a submission

Due: Tuesday, 24 September 2024, 10:00 AM

In this assignment, you will apply the ISO/IEC 25010 to create a quality model for an existing application that you can choose.

To complete the assignment, do the following:

1. Open the ISO/IEC 25010 document (see Materials) and read sections 3.5 and 3.6 (including Table 1).
2. Discuss in your group what the different terms in Table 1 mean. Use other parts of the standard document to help your understanding.
3. Choose a software application or product that most members of your group are familiar with.
4. Analyse the software application using the framework for user needs given in Table 1.
5. Create your own table based on Table 1 (keep the row and column names and overall structure) that describes your analysis. You must include primary, secondary, and indirect users, and each of the quality attributes in the rows. If some of these are less relevant for your chosen application, indicate this in the table.
6. Finally, write a short explanation of which application you chose and motivate the choices you made for your quality model (the table).

Hints:

- In Table 1 of the standard, "Content provider" and "Maintainer" and their main activity (interacting, maintaining, etc.) are only examples. Analyse your chosen application and list relevant secondary users instead of the examples.
- The questions in the table cells ("How effective ...", "How efficient ...", etc.) are meant to be replaced by an actual definition. In other words, the cell should contain an answer to the question.
- If you find that you can't think of secondary or indirect users, consider the broader implications of the application - who is affected by it? Alternatively, you may have chosen an application that is too simple. Maybe you have to pick another one for these aspects to be meaningful.

Format

You must submit your answer as a single PDF file. The PDF file must have your group name and the name of the assignment in the top margin.

Grading

This task is graded as follows:

3p: The standard is applied correctly. Primary, secondary, and indirect users as well as the quality attributes are understood correctly. The table cells have sensible definitions. The table is explained and motivated well.

2p: There are some shortcomings in applying the standard. At least two concepts are not correctly understood but most are correctly understood.

1p: There are several shortcomings in applying the standard. Several concepts are not correctly understood but there are also some that are correctly understood.

0p: The answer indicates a lack of understanding of the concepts.

Use of AI and collaboration with other students

You may use AI tools to get inspiration for your submission, but you must not directly use AI-generated text in the answer. This is a group assignment and collaboration among the members of your group is required. You may also discuss the assignment with members from other groups, but your group's submission must not include parts made by other groups.

Submission status

This assignment requires submission in groups. You are not a member of any group, so you cannot create a submission. Please contact your teacher to be added to a group.

| Feedback comments | Great job on the extensive analysis of the Booking website. All of the different aspects are covered clearly. One thing to notice is the usage of the "user" while talking about bank services or hotel staff was a bit confusing and maybe you needed to make it a bit clearer. Again, great job and good luck with the upcoming submissions. |
