Software measurement

To do: Make a submission To do: Receive a grade

Opened: Tuesday, 29 October 2024, 10:00 AM
Due: Tuesday, 12 November 2024, 10:00 AM

Instructions

The goal of this assignment is to demonstrate an understanding of the basic software measurement concepts according to ISO/IEC 15939. To complete this assignment, do the following:

1. Choose an existing software product or service that you know something about. Identify two different information needs related to that product/service and describe them according to the ISO/IEC 15939 standard (i.e. for each information need, create a table similar to Figures A.2/3 in the standard document). Attach your descriptions as a single PDF file to the submission.
2. Additionally, briefly answer the following questions in the same PDF file:
 - What are the similarities and differences between ISO/IEC 15939 and ISO/IEC 25010:2019 standards? Name at least three similarities and three differences that you think are relevant. Base your answer on the Annex A section of the ISO/IEC 15939 document.
 - How is the Goal-Question-Metric (GQM) approach related to ISO/IEC 15939 concepts? In the ISO/IEC 15939 document, focus on Figure A.1 and information relevant to that figure and discuss how it compares to the GQM approach.

Submission

As a single PDF file containing the answers to the questions above. The filename should be prefixed with your student number

Notes:

- The ISO/IEC 15939 can be downloaded from: https://primo.aalto.fi/permalink/358AALTO_INST/ha1cg5/alma999377428906526

Grading:

- Part 1: for each information need, either 1p (the information need is sensible and described correctly according to the standard) or 0p (the information need is not sensible or not described according to the standard)
- Part 2: for each question, either 0.5p (the similarities, differences and relations mentioned are correct and explained through information from the standards), or 0p (the similarities, differences and relations are incorrect or not explained through information from the standards).

Use of AI and Collaboration with Other Students: Using AI tools to produce an answer for this assignment is not permitted.All parts of the submission must be produced by yourself (apart from files provided in the assignment). Collaboration with other students is not permitted. This is an individual assignment that you must author independently.

Submission status

Attempt number	This is attempt 1.
Submission status	No submissions have been made yet
Grading status	Not marked
Time remaining	Assignment is overdue by: 120 days 3 hours
