CI/CD Assignment 1: Setting Up Azure Pipelines

To do: Make a submission

To do: Receive a grade

Due: Tuesday, 19 November 2024, 10:00 AM

Objective:

In this assignment, you will set up an Azure DevOps organization, import a Git repository, and request the necessary resources for running CI/CD pipelines. This will prepare you for configuring and executing pipelines in the next assignments.

Instructions:

1. **Accessing Azure Pipelines:**

- Visit the Azure Pipelines website: <https://azure.microsoft.com/en-us/free/students>, or <https://dev.azure.com/>
- Click on "Start free" and sign in using your Aalto University account credentials.
- During the setup, select Finland as your country/region.

2. **Creating Your Azure DevOps Organization:**

- Name your Azure DevOps organization using your student number.
- Create a private project within this organization and name it Oscar.

3. **Importing a Git Repository:**

- Go to the Repos section within your newly created Azure DevOps project.
- Choose the option to import a repository.
- Use the following URL to import the Django Oscar repository: <https://github.com/django-oscar/django-oscar>
- Make sure that the "Requires Authentication" option is unchecked since the Django Oscar repository doesn't require authentication.
- Wait for the import process to complete. Once done, check that all files are visible in your repository.

4. **Requesting Free Parallel Jobs:**

To run CI/CD pipelines in future assignments, you will need to request free parallel jobs from Microsoft. For this, follow these steps:

- Review the information available at Azure DevOps Parallel Jobs: <https://learn.microsoft.com/en-us/azure/devops/pipelines/licensing/concurrent-jobs?view=azure-devops&tabs=ms-hosted>.
- Submit a request for free parallel jobs using the Parallelism Request Form: <https://aka.ms/azpipelines-parallelism-request>.
- When filling out the form, enter your full name, Aalto University email address (the one used to sign up for Azure DevOps), and the name of your Azure DevOps Organization.
- Indicate that you are requesting parallelism for private projects.
- Note: It may take up to 2-3 business days to receive a response.

5. **Giving Access to TA Team:**

- To ensure your project is correctly configured for the next assignment, you must grant access to the TA team.
- Go to your project within your organization with *https://dev.azure.com/organization-name/project-name* replacing project-name with your project name and organization-name with your actual organization name (In this case **organization name is supposed to be your student number**).
- In the lower-left corner of the page, click on the *Project settings* gear icon.
- Under the General section, click on *Teams*.
- Under the Teams, click on the *New Team* button.
- You can write a name like "TQA TAs" to the team.
- In the "*Members*" field, enter the emails of our teaching team separated by semicolons (e.g., *fabian.fagerholm@aalto.fi;akram.aziz@aalto.fi;ali.amaan@aalto.fi;jamala.khaligova@aalto.fi;manushree.tyagi@aalto.fi;stanislav.chren@aalto.fi;thong.cam@aalto.fi;tuan.m.tran@aalto.fi;ulas.aydin@aalto.fi;vipul.kumar@aalto.fi;ziqui.wang@aalto.fi*)
 - Permissions can stay as default (\Contributors)
 - Check the *Add admin(s) to team as member(s)* and *Create an area path with the name of the team checkboxes*.

Submission Requirements:

- Your Azure DevOps organization should be correctly named, and the project should be private.
- The Django Oscar repository must be successfully imported and visible in your project.
- You should have submitted the request for free parallel jobs and provided a screenshot of the confirmation.
- Ensure that the TA team has access to your project as outlined above.
- Provide the URL of your project and a screenshot of the confirmation for Azure DevOps Parallel Jobs in the free text submission field on MyCourses. You can confirm the granted parallel jobs by going to Organization settings, selecting Parallel jobs under the Pipelines menu, and verifying that you see 'Free tier' (instead of 0) under Microsoft-hosted parallel jobs for private projects.

Submission: Free Text Submission. Provide the URL of your project and a screenshot of the confirmation for Azure DevOps Parallel Jobs in the text submission field on MyCourses.

Grading: The assignment is graded out of 2 points based on the correct naming of your Azure DevOps organization and privacy setting of the project, successful import and visibility of the Django Oscar repository in your project, and access granted to the TA team as explained above, with submission of the required screenshot.

Use of AI and Collaboration with Other Students: Using AI tools to produce an answer for this assignment is not permitted. All parts of the submission must be produced by yourself (apart from files provided in the assignment). Collaboration with other students is not permitted. This is an individual assignment that you must author independently.

Submission status

Attempt number	This is attempt 1.
